

Think about your actions and reduce waste to save energy and reduce CO₂ emission!!

Kyoto University has set a goal to reduce energy consumption and CO₂ emission by 2% by unit area every year.

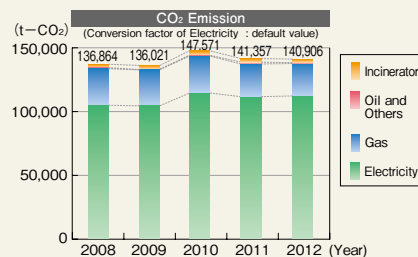

Although, in 2012, the university achieved a reduction of energy consumption and CO₂ emission compared to the previous year, we failed to reach our established goal.

All countermeasures that we are practicing for energy saving will not affect educational and research activities on campus. Let's stop wasting energy and use it more practically.

Compared to the previous year, we decreased energy consumption by

0.2% in total
0.6% by unit area

Compare to the previous year, we decreased CO₂ emission by

0.3% in total
0.7% by unit area

Do you know?

Do you know about the environmental efforts of Kyoto University?

Please see the Environmental Report on the official Kyoto University Website for more information!!

- Sustainable Campus
- Sustainable Week
- Environmental Levy System
- Sustainable Handbook
- Visualizing the Use of Electricity
- Eco-Declaration

You can find the Kyoto University Environmental Report on the official Kyoto University Website. Click "Environmental Report" on the top page!

Each one of us has a responsibility! Let's double-check!!

3 Action Points

28°C and over for the cooler,
20°C or less for the heater!

1. Do you switch off lights and other electric equipment when you leave the room? Do you use eco-friendly electricity power strip?
2. Do you observe the recommended temperature rule when using the air conditioner?
3. Is your PC set to energy saving mode?

Pull out a plug while they are on standby!!

Switch them off as often as possible!!
